MG

Augusto

Are you making progress on a 3D printed StealthHouse? Just wanting to assess where we're at?

We have a stack of material courtesy of ARPA-e, and the printer, so why not have it chugging away in the background? If we have the geometry for the larger model, I say go for it! We'll learn a lot - really.

It takes a lot of time to print with that printer, to do the little model of the Fulcrum House took me several iterations. It is not an easy printer, especially to get good results for an exhibition...

Best,
Augusto

> > Their Expo can’t touch the walls, so its a scaffolding display platform and all universities can exhibit “something” at max 50cm x 50cm x 50cm: so Augusto - dust off that 3D printer: no reason not to do it if Kii/Marc/you have the geometries of all the panels and big elements: making it beautiful will be the challenge. But all in black it suits, and frames, etc could be carbon reinforced.
